

Throughout his career, Dr. Danny Chung has been privileged to lead transformative initiatives at the intersection of business strategy, technology, and cross-cultural execution. His work with global organizations such as Chubb, AIG, Cathay Pacific, and Sun Life has taken him across Asia, EMEA, and North America, where he has developed a deep understanding of how complex projects succeed in diverse and challenging environments. Dr. Chung's professional journey has been shaped by three core competencies: creating business value through IT modernization, leading seamless post-merger integrations, and driving large-scale organizational transformations.

As Global Head of IT Operations at Chubb Life, Dr. Chung has translated these skills into practice, directing strategy and operations across 13 countries while building high-performing, multicultural teams. This operational experience was complemented by his board-level engagements with AIG, Sun Life, and the Hong Kong Jockey Club, where he gained valuable insights into governance, risk management, and stakeholder alignment.

Dr. Chung's connection with PMI spans more than two decades, beginning with his volunteer work at the PMI Toronto Chapter in 2000. This relationship has grown in multiple dimensions—as a volunteer providing pro bono C-suite and project management consultation to NGOs and charitable organizations, as a conference speaker sharing practical insights, as an author contributing to project management literature, and as an educator teaching EMBA courses at leading Asian universities.

These experiences have given him a profound appreciation for PMI's role in developing project leadership capabilities worldwide. Beyond corporate leadership, Dr. Chung has extended his expertise to the social impact sector through board-level advisory roles with charitable organizations, focusing on sustainable governance practices. This blend of professional experience—combined with his multicultural background and fluency in English, Mandarin, and Cantonese—uniquely positions Dr. Chung to contribute to PMI's global mission.
